Society of Canada | de la Sclérodémie

**PHA Canada and Scleroderma Society of Canada (SSC) have joined forces to help improve the lives of all Canadians affected by pulmonary arterial hypertension (PAH).**

### **Our Position:**

PHA Canada and SSC believe that all PAH patients in Canada—no matter where they live, their financial situation, or whether they have private health insurance—should have access to optimal treatment.

### **The Issue:**

After almost one year, the provincial and territorial negotiations for Opsumit through the pan-Canadian Pharmaceutical Alliance (pCPA) have been closed. **This decision means that PAH patients across the country\* who could benefit from Opsumit are unable to access it through public funding.**

\*except in Quebec where public funding is available
